USA

INTERMATEX GROUP

INTERMATEX USA was established in the US in 2014 in the city of Savannah, state of Georgia. It is the subsidiary of **Intermatex S.L.** in Spain, a company with almost 30 years experience dressing homes, right in the center of the ceramic industry cluster in Castellon.

The main goal is to offer, from our Savannah depot, to all US customers very unique, attractive, high quality and saleable mosaics with a quick delivery service (door to door) to your business (3-5 days). The wide selection of product responds to the tastes of the American consumer, both in colors and finishes, as well as materials and chips size.

We aim our efforts to earn the trust and loyalty of our customers laying the foundations for a long term business relationship.

MOSAIC

Substrate preparation:

The substrates need to be clean, compact, perfectly flat and free of dirt and cracks.

Fix all the uneven areas of the surface, leveling compound might be needed to make the surface flat.

Ensure the surface is dry, with a maximum of 3% moisture content.

Do not install the mosaic tiles directly over plywood or drywall.

Laying mosaic:

Before starting the installation inspect all mosaic sheets and make sure material is in good conditions and no defects.

Guidelines while laying will help the layout to be straight.

The size of the v-notch trowel depends on the mosaic tiles, thinner the mosaics the smaller the trowel.

We recommend high-performance adhesive for glass mosaics and porcelain.

Make sure to apply only enough adhesive to areas that you can tile within 15 min, because it dries very quick.

After you lay down the mosaics use a grout float to press the mosaics to guarantee perfect adhesion. Ensure the distance between different meshes is the same as the one between the pieces in the same mesh.

Adhesive requires at least 24 hours to dry.

Treat the mosaics carefully as they contain fragile elements such as glass, mirror, steel, aluminium, travertine, marble, resin, porcelain, mother of pearl, quartz, etc.

Grouting:

Before applying grouts make sure all pieces are perfectly clean and free of residues and dust.

Not-sanded grout is the recommended grout to be used for mosaic sheets due to the small grout joint. Never use sanded grout as it may scratch some materials like glass, stainless steel, polished stone, etc.

Using a grout float apply the grout on the mosaics. Use vertical and horizontal stroke to spread the grout. Apply a little pressure to make sure that all the joints are well filled.

While the grout is still fresh, stroke diagonally with the long edge of the grout float to remove excess grout and then wipe it with wet sponge the clean.

Abrasive and alkaline products must not be used to remove residues.

Cleaning:

For cleaning you need: PH Neutral/PH Natural Cleaning Products or glass cleaner and a clean soft cloth (to avoid scratches).

Notes:

All our mosaics are handmade, so small variations in shade are usual. It is recommended to check the pieces before laying.

When cutting mosaics with a wet saw, put a tile or a piece of hard plastic down on the cutting tray.

This is necessary to keep the mosaic away from falling in the wide opening of the blade channel tray to be able to make a good straight cut.
